
Field Services, On & Offshore Support

Quayside to Seabed

Life of Field

Our field services and offshore team are committed to being the customers' trusted life-of-field partner; Deepsea Technologies provide the tools and technological expertise to improve equipment development safely and efficiently.

Our capabilities include, site support, SIT, EFAT, complete project and process management, field development, installation, asset management, field inspection, maintenance and repair (IMR).

Site Support

Our Deepsea Technologies onshore site teams service the industry with 24/7 global support and are passionate about providing our clients with our experience and direction when required.

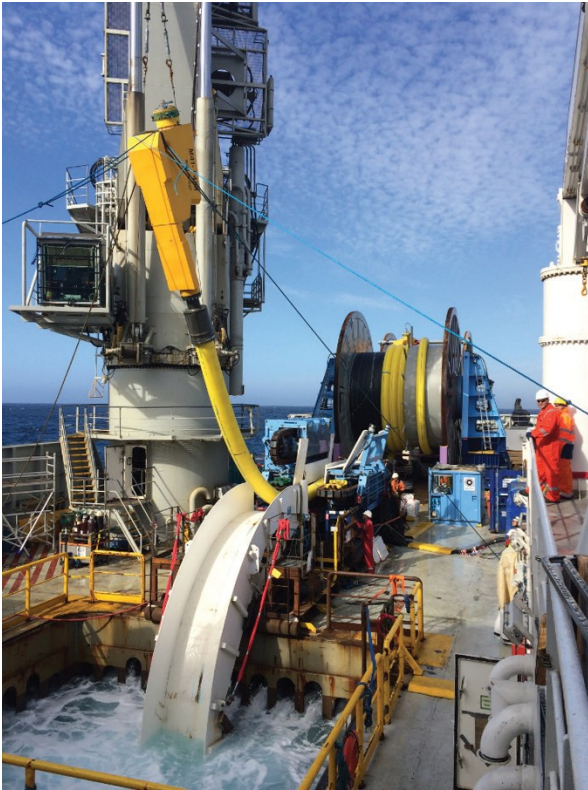

Between the team we bring more than 30 years of onshore assembly testing experience, dedicated to the safe & efficient completion of work scopes.

Deepsea Technologies provide the complete SIT, FAT, EFAT solution with planning right through to completion where we will assemble our supplied equipment and integrate it with client supplied hardware.

We Offer

- Global coverage
- Risk assessment and procedural control
- Client liaison
- Onsite repair
- Flange preparation
- Assembly (torque and tensioning)
- System integration
- Factory acceptance testing
- On site porch assembly
- Pullhead flexible flowline and umbilical assembly and testing
- Umbilical basket loading
- Detailed daily reports
- Client stock and spares control
- Lessons learned and product training

Installation

We bring more than 30 years of subsea installation experience, representing successful completion of numerous projects of all sizes in increasingly complex and challenging environments worldwide.

Our engineers and technicians plan efficiently with our technical onshore and offshore teams to drive forwards successful installation, which also involves planning in resources and operations that are required for the success of all projects.

Our dedication to offering round-the-clock coverage via our well trained team offers offshore/onshore readiness almost immediately. As Company we will assist the operator throughout the assignment to assure quality and quick problem resolution.

Quayside to seabed, our teams manage the assembly, testing, deployment and subsea connection.

Asset Management Services

Our asset management services ensure optimum equipment and tool utilisation, while maintaining industry safety and regulatory compliance. Our experienced personnel manage, maintain, upgrade and lengthen the reliable life of customers' assets. This includes support for Deepsea Technologies supplied as well as customer-owned equipment and tools.

In addition to our site support services previously listed we also include support for:

- Tool management
- Equipment refurbishment
- Equipment and inventory tracking
- Rental of tooling

Inspection & Maintenance

Over the course of a field's life, equipment must be maintained, exchanged or adjusted as a result of wear or increased safety and regulatory requirements. Deepsea Technologies places the highest importance on safety, efficiency and reliability while performing inspection and maintenance repairs. Typical operations are inspection, maintenance and repair of tie-in and connections, and fly to place controls equipment.

We can take care of the coordination of vessel, technicians and tools to deliver a complete and more efficient IMR project.

In regards to inspection and maintenance our services also include:

- Equipment intervention support
- Riser inspection and flowline inspection
- Inspection maintenance and repair (IMR)
