Practical Solutions

ICON

Legendary Innovations Practical Solutions.

Since 1997, ICON Engineering, a Perth-based company with over 120 employees, has been delivering legendary innovations and practical solutions to the offshore energy industry.

With more than 28 years of experience, a portfolio of 1,500+ projects, and a proven global footprint, ICON is trusted by leading operators, EPCI contractors, and suppliers worldwide.

ICON provides end-to-end support across field development, subsea, decommissioning, wellhead platforms, brownfields, rig modifications, offshore equipment and renewables. From feasibility and concept through detailed design, procurement, construction supervision and offshore execution, our focus is consistent: safe, reliable and cost-effective outcomes.

ICON is recognised for pioneering approaches including rig-installed wellhead platforms, wellhead load relief, back-up heave compensation and subsea installation methods that help cut offshore time, interfaces and schedule risk. With more than 1 million LTI-free hours and ISO 9001 & ISO/TS 29001 certification, safety and quality are embedded in how we plan and deliver.

What sets us apart is how we work. We engage early to validate concepts, optimise designs and advise on cost-right methods, then stay hands-on through procurement, vessel hire and execution. Agile resourcing, senior engineering oversight and a problem-solving culture mean fewer hand-offs, faster mobilisation and clearer accountability from day zero to handover.

Legendary Innovations, Practical Solutions delivered practically. Built by engineers who've executed offshore, with results that stand up in the toughest environments.
