

ActiveView Energy Efficiency

Designed for efficiency

ActiveView is designed to deliver strong long-term value by keeping energy consumption significantly lower than comparable refrigerated displays. That lower power demand helps reduce everyday operating costs, making it easier for businesses to protect margins over time.

When managing multiple sites, these savings can quickly add up, turning energy efficiency into a practical commercial advantage rather than just a product feature.

The smarter investment

ActiveView can pay for itself in energy savings alone in as little as 1.7 years, making it a smart long-term investment. While the upfront purchase price is important, the real value becomes clear once lower running costs are factored in. By using significantly less energy than comparable refrigerated displays, ActiveView reduces day-to-day operating expenses from the moment it is installed. That means the savings continue to build over time, allowing the unit to effectively offset its own cost through reduced power consumption.
