

Emrich Packaging Machinery

With over 40 years of industry expertise, Emrich Packaging Machinery stands at the forefront of innovative packaging and food processing solutions. Serving Australasia and Oceania, we specialize in a comprehensive range of packaging machinery, spanning primary, secondary, and end-of-line solutions.

Our RPM equipment line is engineered for speed, hygiene, and scalability, providing end-to-end packaging solutions—from primary forming to fully automated end-of-line systems.

Our Product Portfolio:

<p>RPM Flow Wrapping (HFFS) Machines: Designed for solid, uniform products, these machines deliver high-speed pillow packs, ensuring robust product protection and allowing seamless integration and future line expansion.</p>	
<p>RPM Vertical Packaging (VFFS) Machines: Highly versatile, these machines handle a wide variety of products—from granular items like snacks and grains to powders and liquids, such as flour, spices, sauces, and soups.</p>	
<p>RPM Pre-Made Pouch Machines: Perfect for vertical feeding applications, these machines are ideal for bulk products like powders, snacks, and liquids. They support multiple pouch formats, including Doypacks and flat-bottom bags, and feature a compact design and user-friendly interface for continuous production.</p>	
<p>RPM Horizontal End-Load Cartoning Machines: These machines efficiently place products into retail-ready paperboard cartons, ensuring protection and appealing presentation.</p>	

<p>RPM Case Packing Machines: These systems load cartons or products into larger corrugated cases for bulk storage and shipment, enhancing efficiency and protection.</p>	
<p>RPM Palletising Automation: Utilizing robotic or mechanical systems, palletising automation ensures efficient stacking of cases or bags onto pallets, reducing manual labour and minimizing injury risks, fostering a safer workplace.</p>	
<p>RPM Packing Line Solutions: Our integrated packing line solutions cater to the food industry and end-of-line automation, handling everything from product sorting and primary packaging to case packing and palletising. These systems boost efficiency, ensure hygiene, and reduce manual labour, allowing customization for diverse product sizes, pack formats, and production speeds.</p>	
<p>ZEFA Liquid Filling Solutions: ZEFA automatic filling machines are compact, quick in format change managed by brushless motor and agile on production, reaching 40 pieces per minute. The settings are realized through a touch screen control panel that permit rapid recall of recipes. The filling machine can be equipped with 2, 4 or 6 dosing pumps.</p>	

The Emrich Advantage:

Our solutions deliver high throughput, consistent quality, and flexible customization—all on a single, integrated platform. This enables our clients to meet market demands swiftly, scale reliably, reduce labour, ensure robust traceability, and achieve repeatable performance.
