

## Company Profile: Event Communications Australia

### Overview

Event Communications Australia is a premier distributor specialising in high-performance audio-visual and broadcast technology. Headquartered in Bankstown, NSW, the company provides integrated, reliable signal transport and communication solutions for professional events and installations. Event Communications Australia distinguishes itself by representing leading global brands—such as Green-GO digital intercom, OPTOCORE and BroaMan fibre transport solutions, as well as AudioPressBox and Li.LAC —providing solutions through technical consultation support to ensure seamless operational infrastructure for demanding environments.

ECA's professional mandate is to deliver integrated, market-leading solutions that solve complex challenges in signal transport and communication. The company is known for its technical precision, particularly in systems where reliability and redundancy are non-negotiable requirements, such as touring live sound, broadcast facilities, and permanent high-end installations.

### Product Portfolio

ECA represents a strategic selection of global industry leaders, providing a comprehensive ecosystem of technology that functions seamlessly across demanding environments:

- **OPTOCORE:** As an exclusive distributor, ECA provides advanced, high-bandwidth optical fibre network solutions designed for high-capacity, low-latency, and redundant audio, video, and control data transport.
- **BroaMan:** Specializing in multiformat fibre transport, BroaMan systems facilitate high-bandwidth signal transmission and routing, offering a professional, reliable alternative for broadcast and installation applications.
- **Green-GO Digital Intercom Systems:** A robust IP-based multichannel intercom and CUElight system that eliminates the need for a master station. It offers unparalleled flexibility for integration with DANTE/AES, two-way radios, and remote internet-based locations.
- **AudioPressBox:** Sophisticated audio distribution tools engineered for press conferences and presentations requiring clean signal transmission to multiple outputs.
- **Li.LAC:** Professional microphone disinfection systems that utilize UV-C light technology to provide contactless, toxin-free sanitization within a 19" rackmount format.
