

## Respond quickly to incidents with GUARD1 Duress.

Staff and visitors wear Duress Devices that transmit a signal once per second, providing a real-time location.

In the event of an incident, they can press the button on the Duress Device and it will signal an alert with real-time location, to supervisors or control room staff.

Duress Device signals are captured by Gateways connected via Power over Ethernet cabling that runs throughout the facility.

### Replaces:

- Senstar Flare systems
- Bosch Security Escort systems
- Wall or desk mounted panic alarms
- Radio duress alarms that don't provide real-time location

### Provides:

- Real-time (once per second) location updates
- Real-time location when alarm is pressed
- Secondary alerts such as man down or device not seen

### Includes:

**Duress Pendant**

**Duress Device**

**Gateways**

**Tower light**
