

Highly Reliable, Automated, Open Networks

Enhance efficiency, boost uptime, and future-proof your infrastructure, with an agile and resilient network solution for your organization.

Allied Telesis is a global provider of networking infrastructure for public and private organizations. Founded in Japan in 1987, the company brings together decades of engineering expertise with a long-term focus on quality, reliability, and operational stability. Headquartered in Tokyo and listed on the Tokyo Stock Exchange, Allied Telesis supports customers worldwide with networks designed for secure, dependable operation over time.

We offer a broad portfolio of networking hardware, software, and services, supporting campus networks, branch offices, and data centres. Our offerings address both people-centric connectivity and IoT-driven infrastructure, making them suitable for a wide range of enterprise and public-sector environments. A key differentiator is that unlike most competitors, we manufacture our own products.

Allied Telesis stands out in the networking industry by consistently delivering value through three core strengths: flexibility, reliability, and security. We flexibly adapt to today's network environments and evolve with tomorrow's technologies. We deliver high performance and outstanding reliability to keep customer organizations running. And we protect the entire networking journey with a controlled supply chain and powerful security capabilities.

Customers in a wide variety of industries trust Allied Telesis networks, including government, healthcare, education, transportation, manufacturing, retail, and more.
