# Safeguarding your Cargo

Customised Solutions for the  
Food & Beverage Industry

# Protecting Cargo from Moisture Damage

## Container Desiccants

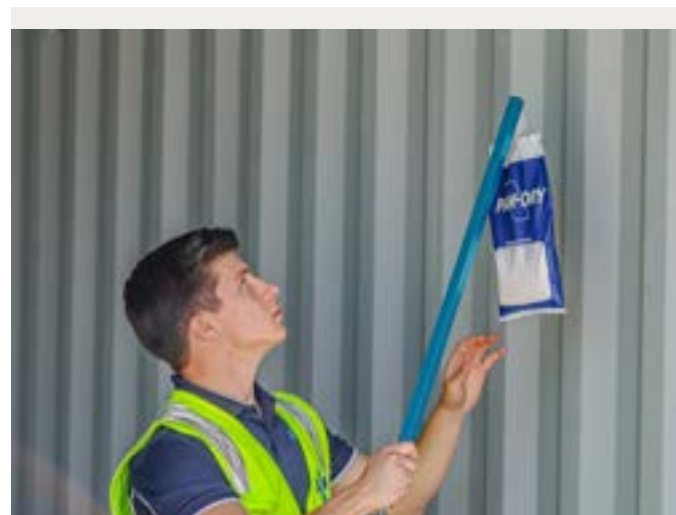

- **Easy to use** - Unique hanging tool for quick placement.
- **Superior Absorption** - 300% Absorption level.
- **Use Less Bags** - 4 x 1kg bags required per 20ft container as opposed to 8 x bags on the market.
- **Leakproof** - Unique one-way absorption membrane.

## Pak-Dry Desiccants

For your long-haul cargo trips, Pak-Dry provides a solution to keep your goods in a dry environment for an extended period of time.

- Absorbs more than 300% of moisture relative to its weight at 95% relative humidity.
- Weight - 500g or 1kg bags.
- Exclusive claw hanger for easy installation.

# Preventing Cargo from Transport Movement

## Dunnage Bags

Inflatable dunnage bags are proven to minimise shipping damage. With outstanding load stabilising capacity, an inflatable dunnage bag can withstand tons of pressure and resistance to load shift.

### Sizes

- 90 x 120cm
- 90 x 180cm
- 120 x 210cm
- 130 x 120cm

*\* Custom sizing available*

### REUSABLE

Able to be reused multiple times

### DURABLE

Ideal for awkward loads and hard-to-reach areas

### CERTIFIED & SAFE

Pressure & Quality tested to International standards

### QUICK & EASY TO USE

Fast inflation with battery powered tool. No cords or trip hazards

### EFFICIENTLY STORED

Flat packed to use up minimal space in storage

# Securing Cargo for Safe Delivery

## Restraint Systems

Our restraint systems are fast & easy to install and provide ultimate cargo security. From lightweight and fragile items through to heavy food cartons, we have a system to suit your requirements.

### Cargo Lash

A continuous roll to help secure complex and ever-changing container configurations.

### Lashing Systems

Suitable for heavy cargo to firmly secure and prevent movement

### Container Door Systems

Flat and inflatable options for cargo to prevent items falling out of container doors.

### Custom Solutions

Tooling, edge protection and anti-slip products to prevent all load movement.

# Packaging Products for the Food and Beverage Industry

## Slip Sheets

Slip sheets provide a lightweight alternative to traditional pallets for food and beverage operations focused on efficiency and space optimisation.

Used with push-pull forklift attachments, they reduce packaging weight, maximise container space, and lower transport costs.

## Stretch Wrap

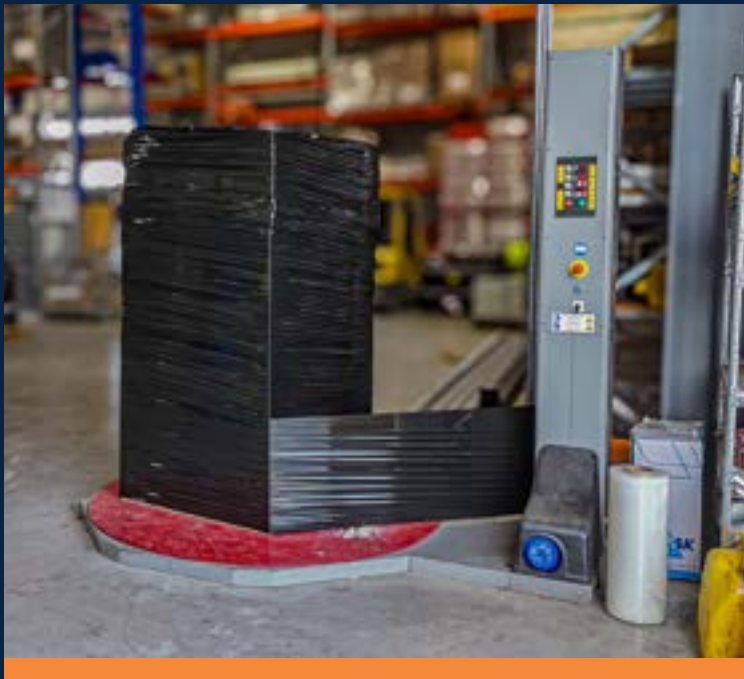

Stretch wrap is a core containment solution across food and beverage warehousing and distribution. Applied to palletised loads, it secures cartons, bags, and containers together, improving load stability and protecting products from dust, moisture, and handling damage.

Correct wrap selection and application are critical to ensure sufficient containment force without crushing packaging or compromising product integrity.

## EcoWrap

EcoWrap offers the same load containment performance as conventional pallet wrap while supporting sustainability targets.

Manufactured with 30% recycled content, it helps food and beverage businesses reduce reliance on virgin plastic without sacrificing strength, stretch, or reliability.

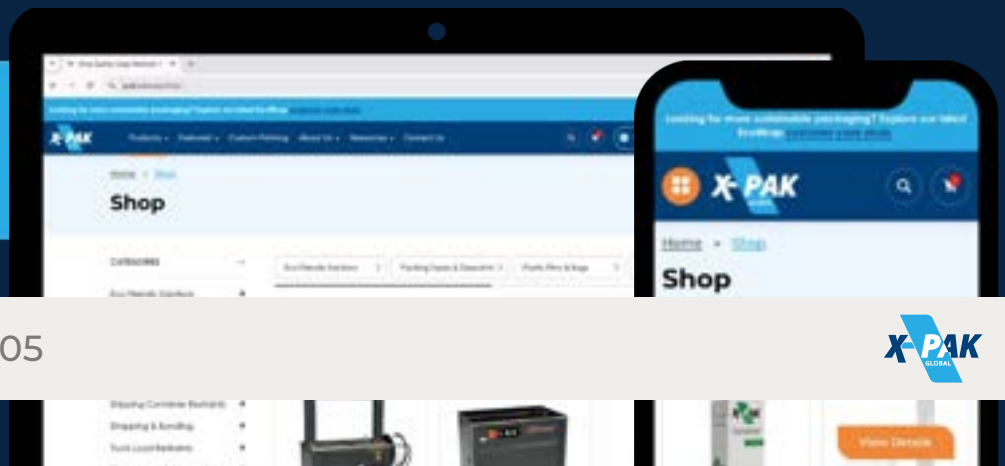

## Wrap Machines

Stretch wrap machines provide consistent, repeatable pallet containment for food and beverage operations handling high volumes.

By controlling film tension, wrap patterns, and containment force, machines reduce film usage, minimise operator variability, and improve load stability.

They also enhance workplace safety and throughput, making them well suited to production lines, distribution centres, and export facilities.

# Customers We've Helped in the Food and Beverage Industry

## Eastcoast Beverages

Eastcoast Beverages partnered with X-Pak Global to reduce their environmental footprint without compromising load performance.

By switching to EcoWrap pallet wrap made with **30% recycled content**, they achieved a measurable reduction in virgin plastic use while improving containment strength and maintaining the reliability required for high-volume beverage distribution.

The transition required no changes to existing wrapping equipment and supported Eastcoast's broader sustainability commitments.

## Darrell Lea

Darrell Lea faced recurring product damage when exporting premium confectionery due to load movement and unfilled voids inside containers.

X-Pak Global implemented a tailored dunnage bag solution, supported by portable inflation equipment, to stabilise loads during sea transport.

The result was a significant reduction in damaged goods, safer unloading conditions, and improved protection of high-value food products throughout export supply chains.

## Flavour Makers

Flavour Makers partnered with X-Pak Global to improve safety, efficiency, and product protection across their domestic and export freight operations.

By replacing traditional compressor inflation methods with X-Pak's Inflate-X Pro unit and dunnage bags, they significantly reduced manual handling risks while speeding up container loading.

To further protect product quality, Pak-Dry container desiccants were introduced to control moisture during transit. The combined solution reduced product damage, improved worker safety, and delivered measurable efficiency and cost benefits.
