

FOOD AND BEVERAGE

MANUFACTURING FACILITY FITOUTS

Designed and delivered around your production schedule.

Heighton designs and delivers facility fitouts for food and beverage manufacturers. We manage the full scope from feasibility and design through to construction and handover with one project lead, a clear staging plan, and a commitment to keeping your plant running throughout.

HOW WE WORK

YOUR PLANT KEEPS RUNNING

We stage all work around your production schedule. Phased programming, clear zoning, and contamination controls mean your lines keep moving and your audits stay clean. Production disruption is not an acceptable trade-off, and we plan the program with that as the baseline.

ONE PARTNER FULL ACCOUNTABILITY

One project lead from brief to handover. No variations policy. No blame passed between trades. You have a single contact who coordinates design, approvals, construction, and commissioning and owns the outcome at every stage.

BUILT FOR FOOD & BEVERAGE

Hygienic design, the right materials, an HACCP-compliant layouts from day one. We work across chilled, ambient, beverages, snacking, and sauces and understand what your auditors, retailers, and export customers expect from a modern production facility.

PROJECT EXAMPLES

ALL NATURAL KITCHENS

Mezzanine extension designed to span existing QA and washdown areas. Phased staging delivered around live food production with full contamination controls throughout.
